REZKLAD WALL GROUT

ATLAS has supplied jointing material for wall tile and SGFT (structural glazed facing tile) for many years. Rezklad and HP Mortar perform very well, but recent feedback prompted the development of a new product.

REZKLAD WALL GROUT is a solvent free, resin based grout for pointing joints of structural glazed facing tile and ceramic wall tile.

While REZKLAD WALL GROUT can be used on floors, its primary advantages are designed for wall applications:

1. Excellent **workability** as a pointing material
2. Outstanding **anti-sag** properties
3. Optimal UV resistance

Please see the product data sheet for additional information.
